RESIL
Science For Change

SILKOIST 521

Shear stable (suitable for exhaust application) 5th generation block chemistry for knit substrates.

SILKOIST 521
New generation sustainable hydrophilic soft flow stable finishing solution for Knitted fabrics.

- Sustainable
- Biodegradable
- Energy Efficient

Conventional silicones and disadvantages

Classical Approach	Technology	Finish performance
Conventional hydrophobic / hydrophilic / oil with standard emulsifiers.	Highly unstable emulsion whose particles shear force, resulting stability to strong emulsifying water hardness, temperature, pH variation.	Streaks, surface build / some feel will possible inside change for dyed goods / wet coating of clothes.
Stability	Environment aspect	Application restriction
Highly susceptible to O3, Chlorine bleaching, pH variation, water hard / residual gas pressure variation.	Good softness / strength results in higher PO ₄ and CO ₂ values, higher toxicity to waste water.	Not suitable for exhaust application where high electric force is in play.
